

L&N Technologies, a licensed electrical contractor specializing in low voltage systems, is proud to announce they have been awarded the Service Disabled Veteran Owned Small Business Certification (SDVOSB).

The SDVOSB certification validates that L&N is over 51% owned, controlled, operated, and managed by a minority and requires extensive documentation to obtain. There are over 34k members representing SDVOSB. With this certification, the benefits are access to the SBA Office of Veteran Business Development's resources for business training, counseling, and financial assistance. As a Service-Disabled Veteran, the government has established a requirement of awarding 3% of federal contracts to SDVOSB. This equates to billions of dollars and opens up additional opportunity channels in the procurement chain for those disabled during their military service.

About L&N

L&N Technologies is a licensed electrical (LV) design and build contractor specializing in low voltage systems. Serving the DC, MD, VA, and NC areas, our methods are accomplished through collaboration with I.T., architectural / engineering, and electrical sector partners with whom we have built strong ties. L&N designs and implements the structured cabling solutions that fit any need. We work in accordance with national standards to guarantee high-quality cabling and wiring products and services.
